

Test Plan for automationexercise.com

Application under test: <https://automationexercise.com/>

1. Introduction

This document contains a simple test plan for the website <https://automationexercise.com/>.

The purpose of this test plan is to describe important testing scenarios for the application and explain why they are valuable for testing an e-commerce platform.

The website is an e-commerce practice application, therefore the testing focuses on:

- cart functionality
- product validation
- navigation
- mobile responsiveness
- search functionality
- UI behavior
- brand/category navigation
- usability

2. Test Objective

The objective of this test plan is to verify that the most important user flows and functionalities work correctly and provide a stable user experience.

The automated tests validate:

- product behavior
- cart persistence
- quantity handling
- navigation functionality
- mobile behavior
- homepage components
- brand filtering
- search functionality
- empty cart validation
- UI consistency

3. Test Environment

Item	Description
Website	https://automationexercise.com/
Testing Type	UI Functional Testing
Automation Tool	Playwright
Programming Language	C#
Test Framework	NUnit
Browser	Chromium
Operating System	Windows

4. Testing Scenarios

ID	Scenario	What to test	Priority	Why this adds value
MyTestCase1 – CartPersistsAfterRefreshTestCase	1. Launch browser 2. Navigate to url http://automationexercise.com 3. Verify that home page is visible successfully 4. Add a product to cart 5. Verify that Added To Cart popup is visible 6. Click View Cart button 7. Verify that product is displayed in cart page 8. Refresh the browser page 9. Verify that the same product is still displayed in cart after refresh 10. Verify that cart quantity and product details remain unchanged	Verify that a product remains in the cart after refreshing the page.	Cart persistence and session stability after browser refresh.	The product should still be displayed in the cart after refresh, with the same quantity and details.

MyTestCase2 – AddSameProductMultipleTimesTestCase	1. Launch browser 2. Navigate to url http://automationexercise.com 3. Verify that home page is visible successfully 4. Hover over first product 5. Click Add to cart button for the same product 6. Click Continue Shopping button 7. Hover over the same product again 8. Click Add to cart button again 9. Click View Cart button 10. Verify that the product is displayed in cart page 11. Verify that product quantity is increased correctly 12. Verify that total price is updated correctly according to quantity	Verify that adding the same product multiple times updates the quantity correctly.	Cart quantity handling and total price calculation.	The same product should appear in the cart with the correct increased quantity and updated total price.
MyTestCase3 – MobileBackToTopTestCase	1. Launch browser in mobile viewport 2. Navigate to url http://automationexercise.com 3. Verify that home page is visible successfully 4. Scroll down page to bottom 5. Verify that SUBSCRIPTION text is visible 6. Verify that Back To Top button is visible on mobile view 7. Click on Back To Top button 8. Verify that page scrolls back to top successfully 9. Verify that homepage slider/banner is visible again after scrolling to top	Verify that the Back To Top button works correctly on mobile devices.	Mobile responsiveness and scrolling behavior.	After clicking the Back To Top button, the page should scroll back to the top successfully and the homepage banner should become visible again.
MyTestCase4 – VerifyProductsInfoTestCase	1. Launch browser 2. Navigate to url http://automationexercise.com 3. Verify that home page is visible successfully 4. Click on Products button 5. Verify that user is navigated to ALL PRODUCTS page successfully 6. Verify that products list is visible 7. Get all visible products from products list 8. Verify that each product has an image displayed 9. Verify that each product	Verify that all products display the required product information.	Product information visibility and UI consistency.	Every visible product should display a valid image, product name and price.

	has a visible product name 10. Verify that each product has a visible product price 11. Verify that at least one product exists on the page			
MyTestCase5 – VerifyAllBrandPagesTestCase	1. Launch browser 2. Navigate to url http://automationexercise.com 3. Click on Products button 4. Verify that user is navigated to ALL PRODUCTS page successfully 5. Verify that Brands section is visible on left sidebar 6. Click on POLO brand 7. Verify that user is navigated to Brand - Polo Products page 8. Verify that at least one product is displayed 9. Click on H&M brand 10. Verify that user is navigated to Brand - H&M Products page 11. Verify that at least one product is displayed 12. Click on MADAME brand 13. Verify that user is navigated to Brand - Madame Products page 14. Verify that at least one product is displayed 15. Click on MAST & HARBOUR brand 16. Verify that user is navigated to Brand - Mast & Harbour Products page 17. Verify that at least one product is displayed 18. Click on BABYHUG brand 19. Verify that user is navigated to Brand - Babyhug Products page 20. Verify that at least one product is displayed 21. Click on ALLEN SOLLY JUNIOR brand 22. Verify that user is navigated to Brand - Allen Solly Junior Products page 23. Verify that at least one product is displayed 24. Click on KOOKIE KIDS brand 25. Verify that user is navigated to Brand - Kookie Kids Products page 26. Verify that at least one product is displayed	Verify that all brand pages open correctly and display products.	Brand filtering and category navigation.	Every brand page should open successfully and display at least one product.

	27. Click on BIBA brand 28. Verify that user is navigated to Brand - Biba Products page 29. Verify that at least one product is displayed			
MyTestCase6 – EmptyCartCheckoutTestCase	1. Launch browser 2. Navigate to url http://automationexercise.com 3. Verify that home page is visible successfully 4. Click on Cart button 5. Verify that cart page is displayed 6. Verify that cart is empty 7. Verify that Proceed to Checkout button is not visible or not available 8. Verify that user cannot continue to checkout with empty cart	Verify that checkout is unavailable when the cart is empty.	Empty cart validation and checkout restrictions.	The cart should remain empty and the user should not be able to proceed to checkout.
MyTestCase7 – MainSliderLoopTestCase	1. Launch browser 2. Navigate to url http://automationexercise.com 3. Verify that home page is visible successfully 4. Verify that main slider/carousel is visible 5. Verify that first slide is active and visible 6. Click Next button on slider three times 7. Verify that slider returns to the first slide 8. Verify that slider navigation works correctly in loop mode	Verify that the homepage slider loops correctly.	Slider functionality and UI interaction behavior.	After clicking the Next button multiple times, the slider should return to the first slide correctly.
MyTestCase8 – SearchNonExistingProductTestCase	1. Launch browser 2. Navigate to url http://automationexercise.com 3. Verify that home page is visible successfully 4. Click on Products button 5. Verify that user is navigated to ALL PRODUCTS page successfully 6. Enter a non-existing product name in search input 7. Click Search button 8. Verify that SEARCHED PRODUCTS text is visible 9. Verify that no products are displayed in search results 10. Verify that page does not crash and remains functional	Verify search behavior when the searched product does not exist.	Search validation and empty search handling.	The search results page should remain functional and display no products for the invalid search.

MyTestCase9 – LogoRedirectHomeTestCase	1. Launch browser 2. Navigate to url http://automationexercise.com 3. Verify that home page is visible successfully 4. Click on Products button 5. Verify that user is navigated to ALL PRODUCTS page successfully 6. Click on website logo Automation Exercise 7. Verify that user is redirected to homepage successfully 8. Verify that homepage slider/banner is visible	Verify that clicking the website logo redirects users to the homepage.	Logo navigation and homepage redirection.	After clicking the logo, the user should be redirected to the homepage successfully.
MyTestCase10 – NavbarLinksTestCase	1. Launch browser 2. Navigate to url http://automationexercise.com 3. Verify that home page is visible successfully 4. Verify that navbar is visible 5. Click on Home link 6. Verify that homepage is opened successfully 7. Click on Products link 8. Verify that Products page is opened successfully 9. Click on Cart link 10. Verify that Cart page is opened successfully 11. Click on Signup / Login link 12. Verify that Login page is opened successfully 13. Click on Test Cases link 14. Verify that Test Cases page is opened successfully 15. Click on API Testing link 16. Verify that API Testing page is opened successfully 17. Click on Video Tutorials link 18. Verify that YouTube page is opened successfully 19. Navigate back to Automation Exercise website 20. Click on Contact Us link 21. Verify that Contact Us page is opened successfully 22. Verify that all navbar links redirect correctly without errors	Verify that all navbar links redirect to the correct pages.	Navigation flow and link functionality.	All navbar links should open the correct pages successfully without errors.

5. Application Improvements

1. Improve empty search behavior by displaying a “No products found” message.
2. Improve cart feedback by showing cart item count near the cart icon.
3. Improve mobile responsiveness for smaller screen sizes.
4. Improve form validation messages for login, signup and reviews.
5. Improve slider accessibility and navigation visibility.
6. Improve consistency of buttons and UI interactions.
7. Prevent ads/popups from interfering with important user flows.
8. Improve category and brand filtering visibility.
9. Add loading indicators for important actions.
10. Improve checkout validation and error handling.

6. Conclusion

This test plan covers 10 additional automated testing scenarios for AutomationExercise.com that are not included in the original list of test cases.

The selected scenarios focus on:

- cart persistence
- edge cases
- mobile usability
- navigation validation
- UI consistency
- product information
- brand filtering
- search validation

These tests add extra value because they validate important real-world e-commerce behaviors and improve overall application stability and user experience.
